EXPERIENCE

Ntersol, Irvine — Software Engineer

March 2021 - PRESENT

- C# and .Net Backend Developer.
- Build, test, and deploy scalable, efficient, and modular code that can be tested and utilized with ease.
- Maintain large scale code bases identifying issues and potential problems within all phases of the SDLC.
- Work closely with team members to ensure the most efficient and most consistent approach is taken for all ventures.
- Worked with identity service *Okta* to add authentication and authorization services to applications.
- Maintained, designed, and enhanced multiple microservices to support large scale projects.

PROJECTS

Contra Clone — C#, Unity

- Designed and implemented a 2D Unity game that clones the famous retro game *Contra*, and gives a modern twist to the games visuals and enemies.
- Scripted enemy movement, boss mechanics, and terrain interaction to give the player the most realistic feel for the game.

Car Inventory System — Java, SQL

- Utilized a mySQL database to store, and process information on cars to mimic a car dealership database application. Discerning between used and new cars, type, make, model, price, damage, etc.

Twitter Clone — Node, React, Google Cloud

- Designed a basic CRUD application where a user can make a post and display it on a board that other users can see.

EDUCATION

California State Polytechnic University, Pomona — Bachelor of Science in Computer Science

September 2016 - May 2021

SKILLS

C#, .Net Framework, ASP.Net MVC, SQL, Java, OOP, Razor, C++, Angular, React, HTML, CSS

AWARDS

2nd Place at Claremont Local Hackathon: Created a mobile application "Budge-It" that takes spending data and helps college students manage their money.

Presidential Volunteer

Service Award: 2 years service as ambassador lead at PIH Hospital in Whittier

Tools

Github, MS Visual Studio, IntelliJ, Google Cloud, Azure Blob Storage, Okta, Unity, Eclipse, Notepad++, Microsoft Word
